

Reduce Your Cost of Water

Effective preventive maintenance will reduce the cost of water and lengthen the life of your C'treat watermaker. C'treat has many watermakers still in operation after 20 years of service thanks to regular preventive maintenance practices. Continue providing fresh water at a cost of pennies per gallon to your crew by taking a few easy steps:

- Prevent corrosion damage by replacing sacrificial anodes every 3 to 6 months or as needed.
- Achieve optimum RO membrane life by using C'treat filters, built to the tightest tolerances for effective seawater filtration. Replace every 30 days or as required.
- Extend the life of your pump by changing the oil every 30 days with specially formulated C'treat oil.

Genuine C'treat replacement parts have been field proven for over 30 years to provide the best performance for our watermakers. They are in stock and ready to be deployed to any platform around the globe.

*"An ounce of prevention is worth a pound of cure."
Benjamin Franklin*

Contact your local, authorized C'treat Sales Representative by visiting www.ctreat.com to order your replacement parts today. tel: (281) 367-2800 / email: operatorsupportctreat.com@itt.com
